

Metabolic buckling of the growing spine

Sayuj Krishnan S., MBBS, DNB (Neurosurgery)
Department of Neurosurgery, Yashoda Hospitals, Hyderabad, India
Corresponding author: hellodr@drsayuj.info

Keywords

Adolescent idiopathic scoliosis; delay differential equations; Cosserat rod; growth; proprioception; metabolic demand; intervertebral disc

Word count

Main text (excluding references, tables, and figure legends): approximately 4,800 words.

Declarations

Funding

The authors declare that no funds, grants, or other support were received during the preparation of this manuscript.

Competing interests

The authors have no relevant financial or non-financial interests to disclose.

Ethics approval

This study used only computational models and published aggregate data from the literature; no human participants or animals were involved, and ethics approval was not required.

Author contributions

S.K.S. conceived the study, performed the simulations and analyses, and wrote the manuscript.

Data and code availability

Simulation code and analysis scripts supporting this article are available in the public repository referenced in the manuscript Data Availability statement.

Use of generative AI

No generative artificial intelligence tools were used to draft the manuscript text.
